

Evaluation	Violations	Severity
Current menu item does not change color	Consistency of use, recognition rather than recall, match between system and real world, visibility of system status	4
WYSISWG menu explanation overwhelming. Non-coders could be thrown off by HTML tags	Help and Documentation, Match between system and real world	4
“Remove” button under text box to input embed code	Error Prevention, Help user recover from errors	4
No feedback about whether draft user is viewing has been published	Recognition rather than recall, error prevention, help user recover from errors	4
Poor contrast in buttons	Aesthetics, Flexibility and efficiency of use	4
No way to preview changes before saving	Error management, Flexibility and Efficiency of use	4
If you click on the Menu link, it goes to that page in the same window, not a different one, which may make it frustrating to go back. Fortunately changes are not negated if you just hit the back button.	Error management, Flexibility and Efficiency of use	4
Poor sense of layout hierarchy	Aesthetics, Flexibility and efficiency of use	4
There are points where it wasn't intuitive to go back, and you could easily make the mistake of starting over with the process in it's entirety.	User control and freedom	3
too much information and criteria to be added to all processes in general.	Help & documentation	3
Bolder breadcrumb menus	Visibility of system status	3
Opportunity to streamline in general.	Flexibility and efficiency of use	3
It would be really hard to pick any of this up intuitively if you stepped away for weeks, months, or maybe even just days.	Recognition rather than recall	3
“View Changes”: see HTML on right hand side, which could be daunting to non-coders	Aesthetics	3
“Roles” essentially has same information as “Permissions.” Just more broken down.	Flexibility and efficiency of use	3
“Add Link” and “Show Row Heights” in different areas as opposed to group together	Aesthetics,	3
With row heights enabled, the “height” box offers no description as to what the numbers mean	Help & documentation	3

No limit to text box for something that will be displayed as a text hover	Error management	3
Wording can be ambiguous (ie. "State' when it refers to a user being active, pending, or inactive)	Recognition rather than recall	3
Hierarchy of the pages are very confusing	Flexibility and efficiency of use, Recognition rather than recall	4
Misleading boxes & buttons	Consistency of use, Help and documentation, error prevention	4
Wording can be elaborated (i.e. "name" can be "username")	Match between system and the real world, Recognition rather than recall, Help and documentation, Error prevention	4
Too many steps to create a new user and adding a member	Flexibility and efficiency of use	4
Buttons is dark purple with black text	Aesthetic and mimalistic design	4
No breadcumb, status bar of process, or back button	Visibility of system status, Help and documentation	3
Inconsistency throughout the Add image page (i.e. blobs of text, long checkbox options for something)	Visibility of system status, Help and documentation	3
